

Intelligence Renaissance Industries

Our Greater Mission – Company, Institute, Alliance of Partners

As a Company, IRI has embarked on a greater mission to apply scientific and technological discoveries in ways that will more efficiently, more economically, serve the Greater Good of humanity and life, on planet Earth and beyond as we embark on a new era in history, the exploration and colonization of space, and at some point in the future, the contact and interaction with other living beings in our universe.

Our Mission goes further than just ourselves as a for-profit Corporation that is doing the explicit actions you know about as IRI. We are closely aligned with other partners in the private and public sectors, and this spans from academia to professional sports, from entertainment and gaming to mental health, from fundamental physics and theoretical studies to the control of robots in space.

Our Greater Mission is shared with TETRAD Institute and several others:

TETRAD Institute was originally inspired and created to be a centre for scientific research spanning several mutually connected and interdependent themes and topics within the physical, biological, and socioeconomic spheres. The focus was originally and always upon foundational topics, open questions, challenging issues, and also with a clear objective to always seek human-serving, life-sustaining applications for even the most speculative and challenging of those fundamental research topics. Thus, there has been, over the years, the formation of a set of centers, programs and projects, spanning such fundamentals in physics and complex systems, in biology and medicine, in psychology and socioeconomics, in cybernetics and control systems, and always with a strong commitment to education.

Svalbard Global Seed Vault - Safeguarding the world's seeds (and the knowledge of how to use them wisely) for the future

Project Gutenberg - Digital preservation of cultural works, with a mission to "encourage the creation and distribution of eBooks"

SESAME - Synchrotron-Light for Experimental Science and Applications in the Middle East - bringing together scientists and students from diverse and often in-conflict nations and cultures

Nikolka Foundation - Direct educational and practical assistance to underprivileged, disadvantaged, disabled, abused children. Assistance to orphanages and boarding schools, restoration of churches. Special programs for children including master classes in arts, crafts.

Instituto Nacional de Biodiversidad - Intelligent uses of our biodiversities for practical and healthy applications without destruction of our natural environments and with cultivation of sound sustainability practices

Istituzione Leonardo Da Vinci - Education for Youth in the Sciences with a foundation on social responsibility
