

Our Story – the Most Unique and Interesting Company in the World

Our Company has a strikingly unique background and history. Its roots, its evolution, its journey is “one of a kind”. Everything began with our Founder, Martin Dudziak, realizing that what was needed in the world of science, including technology, engineering and mathematics (“STEM”) was a special institute that could freely engage in very advanced, far-reaching, speculative, theoretical research – but to always have that work connected, strongly linked, with practical applications that would benefit the whole of humanity, indeed the whole of living beings, and the future both on Earth and beyond.

Thus, TETRAD Institute began its life. However, to maintain such purity and freedom, it would be necessary to have a sustainable source of sustenance, including capital, and also proper visibility within the world, and also a strong and sustainable channel for delivering useful and practical discoveries into the society and its economy.

Thus, TETRAD Technologies (TetraDyn) was created as a company, to do exactly that. Over time, many STEM discoveries and inventions, from many sources, not only within the Institute, made their way into the world of governmental and private-sector R&D and commercialization. Gradually, the world environment changed, and indeed dramatically, as the whole world progressed more deeply into a variety of non-linear dynamical states, very evident in terms of global climate change, global biological and health change, and within the economic and political spheres.

Riding the “rocky roller-coaster” of the first two decades of the 21st Century led TetraDyn into its own transmutations and metamorphosis into Intelligence Renaissance Industries, the Company of Today. In this course of events, those of us who formed the core group, led by a steadfast captain, “Dr. D”, have learned immensely from the collective accomplishments of ourselves and many others in the scientific, technical, and business worlds. Experience has led us to the strategies and tactics of today which have converged now very well with the situations, needs, and opportunities of today's world.

We have had our share of difficult days and challenging experiences, like any who have been and are pioneers. We have seen grave mistakes and made enough ourselves. We have experienced rejections, dismissives, brush-offs and simply bad attitudes, usually based upon ignorance of what is transpiring and will evolve in our world socially, economically, medically, environmentally, physically. We have learned and adapted, and in this process we have refined what we do and what we offer.

Among our core strategic principles are these:

Accurate, Consistent, Complete, On-Time, Defensible – the “ACCORD” Principle by which we satisfy every partner, client, customer, sponsor, investor with whatever we do and deliver.

Synthesis, Synergy, Symbiosis, Symmetry – the “S4” Principle: Everything should fit together and be mutually enabling, advancing, supporting, enhancing, in what we do as a Company, as a body of people producing and delivering products and services to others

Balance, Boldness, Bravery – the “B3” Principle: Going forth courageously as pioneers, not holding back or retreating in the face of adversity, and being properly equipped with everything we need to do our work effectively, efficiently, and superbly.

Integrity and Intelligence – the “I2” Principle: Using what we know and our ability to adapt, adjust and be creative, but always with Total Integrity to scientific and mathematical logic and to ethics.

Alpha – the “A1” Principle: Being the “alpha” leader in our relations with all, and having the maturity, responsibility, discipline, and care that is mandated for anyone in life to truly be an “alpha” in what they do.

And overall, our motto, which comes from TETRAD Institute and states very precisely what we aim to do in this world, “Our Story”:

life.empowered.lives.engaged.living.enhanced
